RE: Inject #22: Honey Pot

During my recent trip to DEFCON, I became familiar with a pretty neat concept called a HoneyPot. This is where intruders are presented with a vulnerable box that leads to nowhere. I believe that our network should have something like this. This way, intruders can spend their time hacking our HoneyPot rather than something of importance on the corporate network. Please implement this and be able to provide evidence that it is up and running on the network.
