# CSSS 569 Visualizing Data and Models Lab 8: Interactive Visual Display with R + Shiny

Ramses Llobet

Department of Political Science, UW

February 27, 2025

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

► Four lines to build a Shiny app

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

1. ui: front end interface

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

- 1. ui: front end interface
  - Inside fluidPage()

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

- 1. ui: front end interface
  - ► Inside fluidPage()
  - Input and Output functions

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

- 1. ui: front end interface
  - ► Inside fluidPage()
  - Input and Output functions
  - Others: Layout functions

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

- 1. ui: front end interface
  - ► Inside fluidPage()
  - Input and Output functions
  - Others: Layout functions
- 2. server function: back end logic

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

- 1. ui: front end interface
  - ► Inside fluidPage()
  - ► Input and Output functions
  - Others: Layout functions
- 2. server function: back end logic
  - Access input values via input\$... in a reactive context

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

- 1. ui: front end interface
  - ► Inside fluidPage()
  - ► Input and Output functions
  - Others: Layout functions
- 2. server function: back end logic
  - Access input values via input\$... in a reactive context
  - Create output values via render() or reactive() in a reactive context

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

- 1. ui: front end interface
  - Inside fluidPage()
  - Input and Output functions
  - Others: Layout functions
- 2. server function: back end logic
  - Access input values via input\$... in a reactive context
  - Create output values via render() or reactive() in a reactive context
    - Within render() or reactive(), write code to perform some tasks

```
library(shiny)
ui <- fluidPage(...)
server <- function(input, output) {...}
shinyApp(ui = ui, server = server)</pre>
```

- 1. ui: front end interface
  - ► Inside fluidPage()
  - ► Input and Output functions
  - Others: Layout functions
- 2. server function: back end logic
  - Access input values via input\$... in a reactive context
  - Create output values via render() or reactive() in a reactive context
    - Within render() or reactive(), write code to perform some tasks
    - Store them as elements of output via output\$...

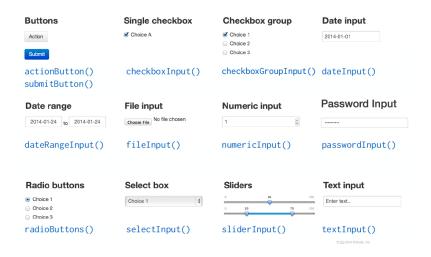

▶ Reactivity: connecting inputs to outputs

- ▶ Reactivity: connecting inputs to outputs
  - Allow outputs to automatically update when an input is changed by the users

- Reactivity: connecting inputs to outputs
  - Allow outputs to automatically update when an input is changed by the users
  - Output has a reactive dependency on input

- Reactivity: connecting inputs to outputs
  - Allow outputs to automatically update when an input is changed by the users
  - Output has a reactive dependency on input
  - You can't read input\$... or modify output\$... outside of a reactive context

### Basic Input functions

- ► Taken from R Studio Shiny tutorial
- ► See more in Shiny Widgets Gallery

# Basic Output and render functions

Output functions	Insert	Corresponding render
dataTableOutput()     imageOutput()     plotOutput()     tableOutput()     textOutput() verbatimTextOutput()     uiOutput()	an interactive table image plot table text text a Shiny UI element	renderDataTable() renderImage() renderPlot() renderTable() renderText() renderText() renderUl()
htmlOutput()	raw HTML	renderUI()

#### Practice time!

Start with these four lines of code:

```
library(shiny)
ui <- fluidPage()
server <- function(input, output) {}
shinyApp(ui = ui, server = server)</pre>
```

# Layouts in UI: Sidebar Layout

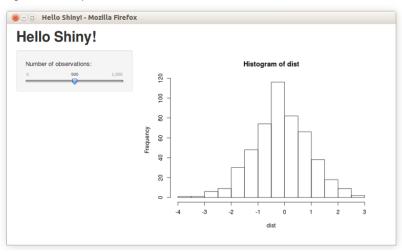

► See more here Application layout guide

```
ui <- fluidPage(
  titlePanel("Hello Shiny!"),
  sidebarLayout(
    sidebarPanel(
      sliderInput("obs", "Number of observations:",
                  min = 1, max = 1000, value = 500)
    ),
    mainPanel(
      plotOutput("distPlot")
```

# Layouts in UI: Sidebar Layout

#### Sidebar Layout

The sidebar layout is a useful starting point for most applications. This layout provides a sidebar for inputs and a large main area for output:

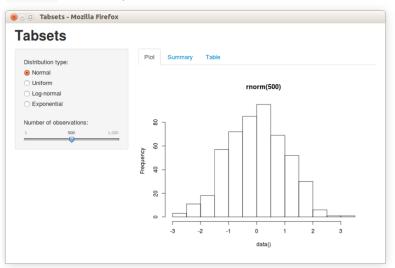

# Layouts in UI: Tabsets

```
ui <- fluidPage(</pre>
  titlePanel("Tabsets"),
  sidebarLayout(
    sidebarPanel(
      # Inputs excluded for brevity
    ),
    mainPanel(
      tabsetPanel(
        tabPanel("Plot", plotOutput("plot")),
        tabPanel("Summary", verbatimTextOutput("summary")),
        tabPanel("Table", tableOutput("table"))
```

# Layouts in UI: Tabsets

#### **Tabsets**

Often applications need to subdivide their user-interface into discrete sections. This can be accomplished using the tabsetPanel() function. For example:

## Extension packages to check out

- plotly for interactive plots (e.g. hovering over points)
- ▶ highcharter for R wrapper for Highcharts javascript library
- shinyWidgets for even more widgets
- shinythemes for Shiny themes
- ► A complete list of extension packages here

#### Other ressources

Introductory book on R Shiny:

► Wickham (2021) - Mastering Shiny

Deployment of Shiny apps on the web:

- Hosting and deployment.
- Deploying Shiny apps to the web
- ► How to publish a Shiny app? An example with shinyapps.io.
- ▶ Deploy Shiny App on Github Pages
